

Thermodynamic Properties Prediction Containing Unfamiliar or Big Molecules Based on Component Family Method

Properties Prediction with EoS

(1) Pure properties calculation
Based on Corresponding State
Principle --- Critical Properties -
about 400 Substances are
reported.

To apply to unfamiliar molecules, prediction
of critical properties with group contribution
method is famous

Lydersen (1955)→**Joback (1984)**

Constantinou and Gani (1994)

Wilson and Jasperson (1996)

Marrero and Pardillo (1999)

(2) Mixture properties prediction
Fitting to small amount of VLE data, Binary
interaction parameter, m_{ij} is obtained.

Poling, Prausnitz, O'Connell, Properties of Gases and Liquids
(5th Ed.), McGraw-Hill (2001)

Joback method

$$T_c [\text{K}] = T_b \left[0.584 + 0.965 \sum \Delta_T - \left(\sum \Delta_T \right)^2 \right]^{-1}$$

$$T_b [K] = 198 + \sum \Delta_b$$

$$P_c [\text{MPa}] = 0.1 \times \left(0.113 + 0.0032 n_A - \sum \Delta_P \right)^{-2}$$

$$V_c [\text{cm}^3/\text{mol}] = 17.5 + \sum \Delta_V$$

Critical properties prediction with Joback method

	Av. Dev. [%]
Tc (Tb:experimental)	1.7
Tc (Tb: Group contribut.)	5.9
Pc	6.1
Vc	8.0
For about 400 molecules	

How much deviation will produce when we predict properties using the Joback method ?

Tc prediction with Joback method

- Tetraglyme M.W. 222 Joback method Tc=708 K
- Oleic acid M.W. 283 Joback method: Tc=942 K
- Triolein M.W. 885 Joback method: Tc= 4,019K
- PAG-1 M.W. 1,082 Joback method :Tc= 8,541 K

Failed to predict properties

★ As M.W. increases, big Tc value is obtained –
not for practical use.

First problem with Joback method

$$T_c [\text{K}] = T_b \left[0.584 + 0.965 \sum \Delta_T - \left(\sum \Delta_T \right)^2 \right]^{-1}$$

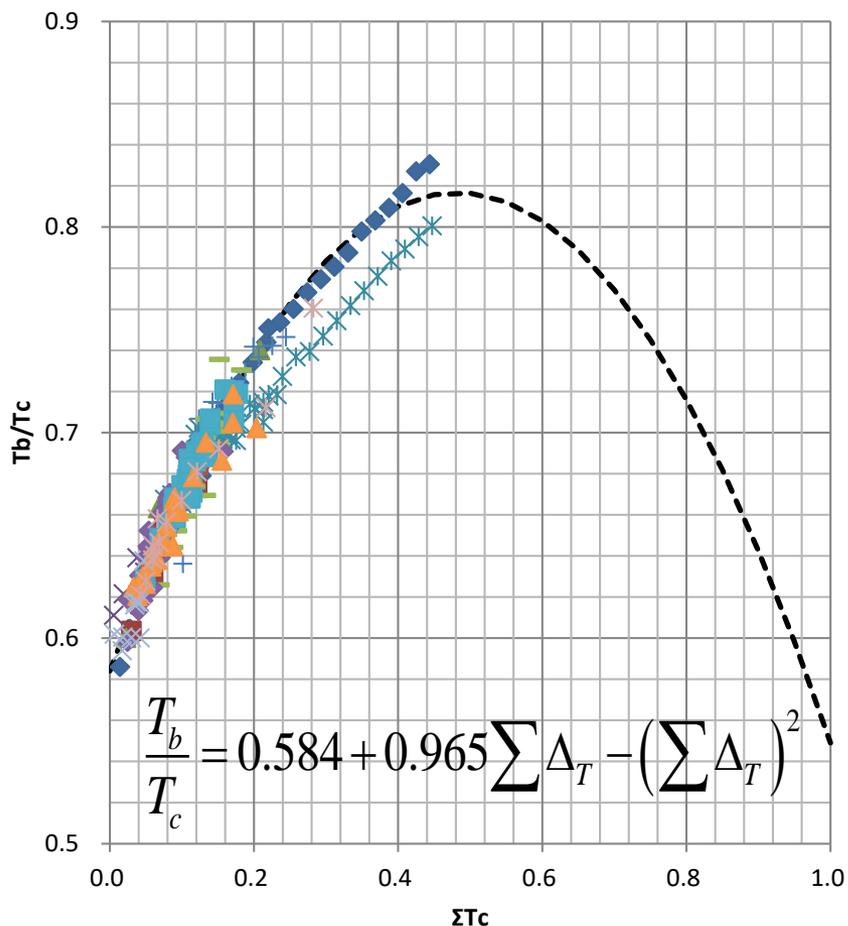

$$T_b [K] = 198 + \sum \Delta_b$$

As T_c is proportional to T_b , too big T_c value is obtained.

Hint to improve prediction of T_c in Joback method

$$\frac{T_b}{T_c} = 0.584 + 0.965 \sum \Delta_T - \left(\sum \Delta_T \right)^2$$

ΣT_c vs. T_b/T_c in Joback method

For about 400 molecules

Except higher alcohols,
Excellent results are
obtained

Observation

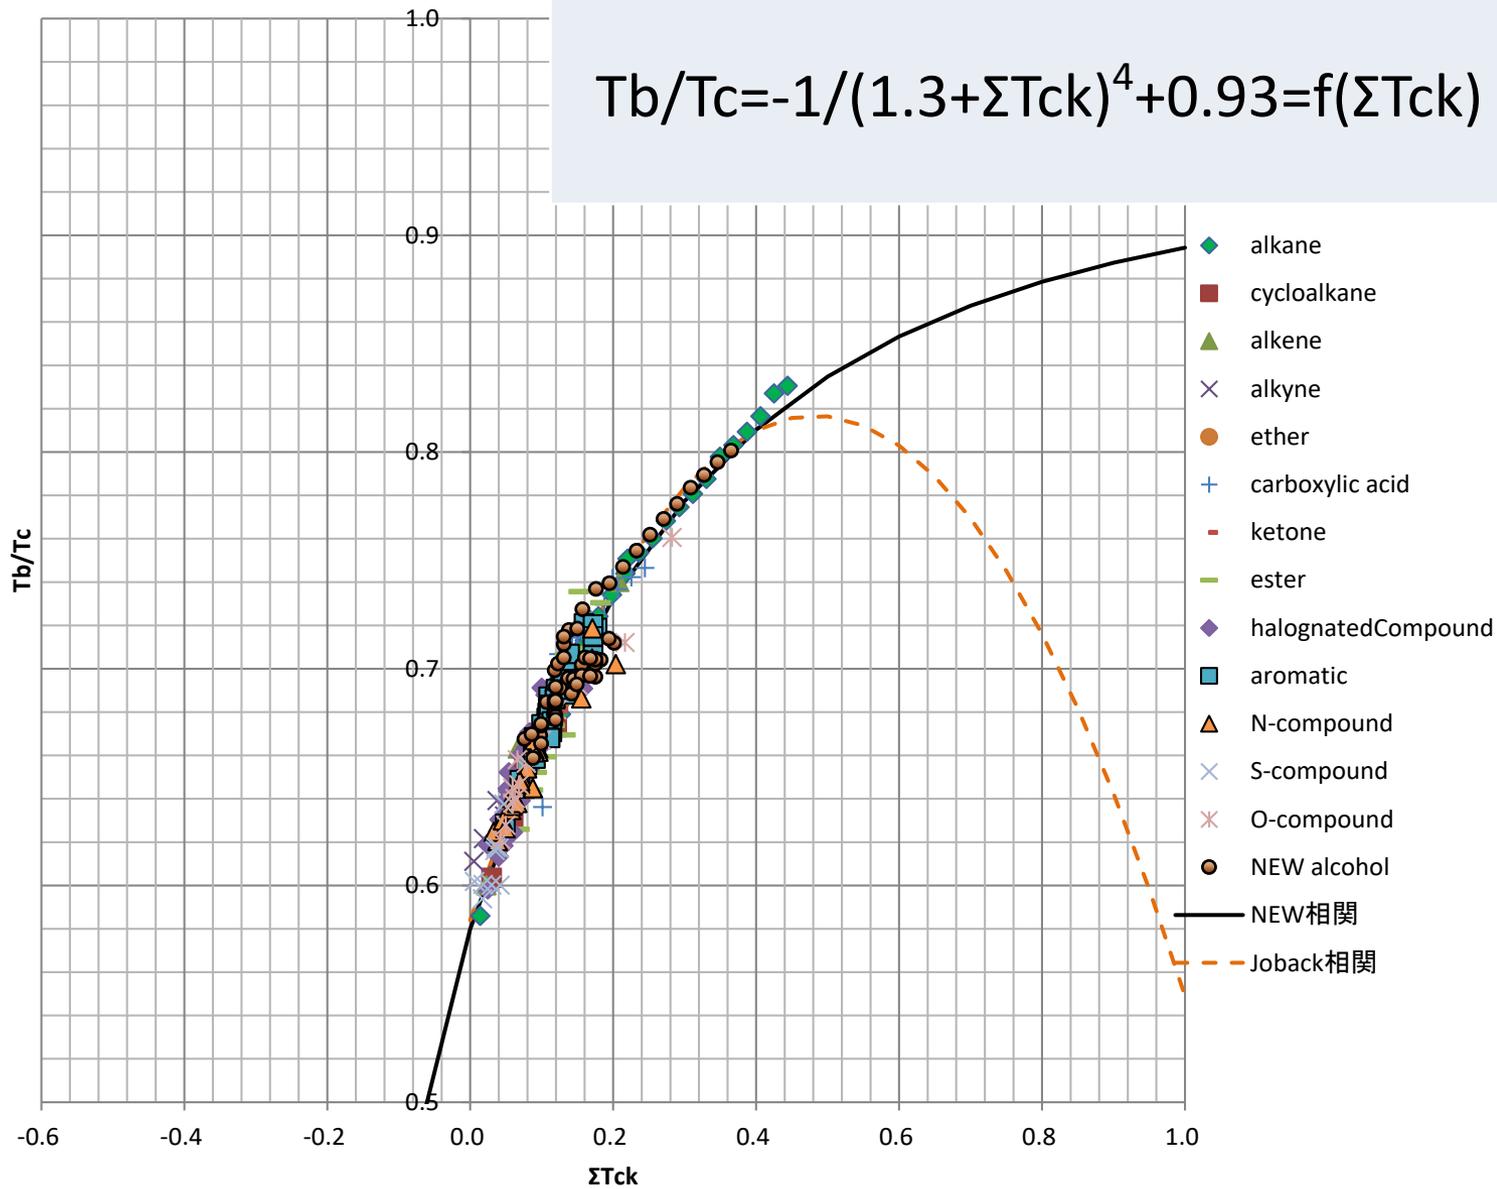

1 : OH contribution for
higher alcohols is
neglected.

2. Maximal of T_b/T_c is
unity at most

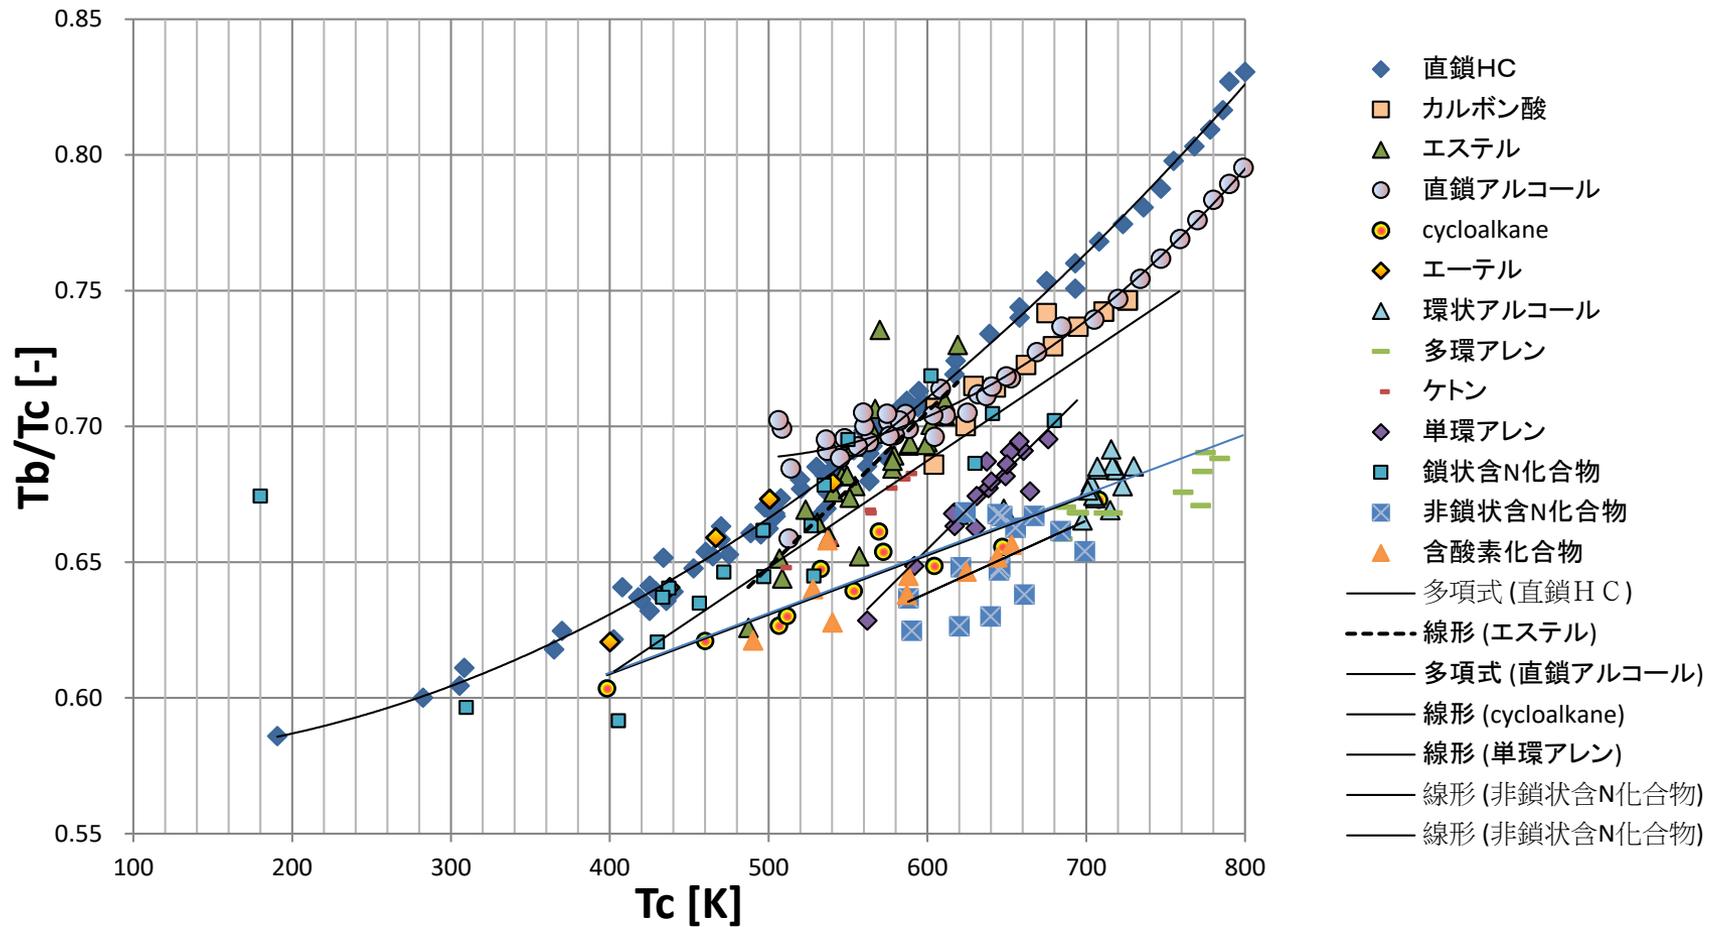

3. As ΣT_c increases,
 T_b/T_c increases
monotonically and
approches unity at
most.

- ◆ alkane
- cycloalkane

- Joback 相關

$$T_b/T_c = -1/(1.3 + \sum T_{ck})^4 + 0.93 = f(\sum T_{ck})$$

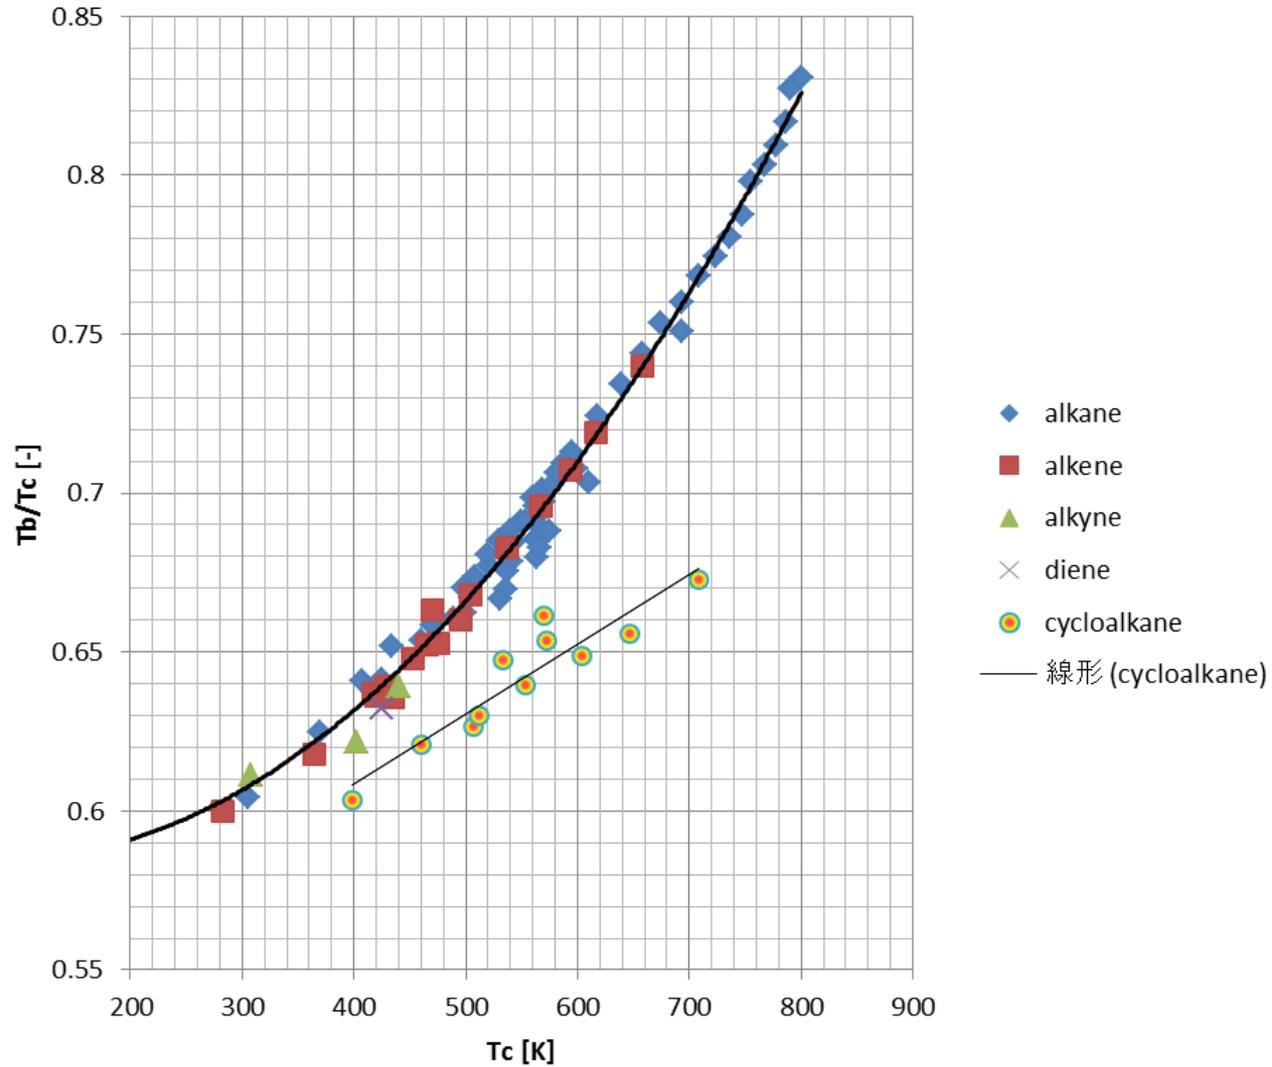

Second problem with Joback method: Tc vs. Tb/Tc

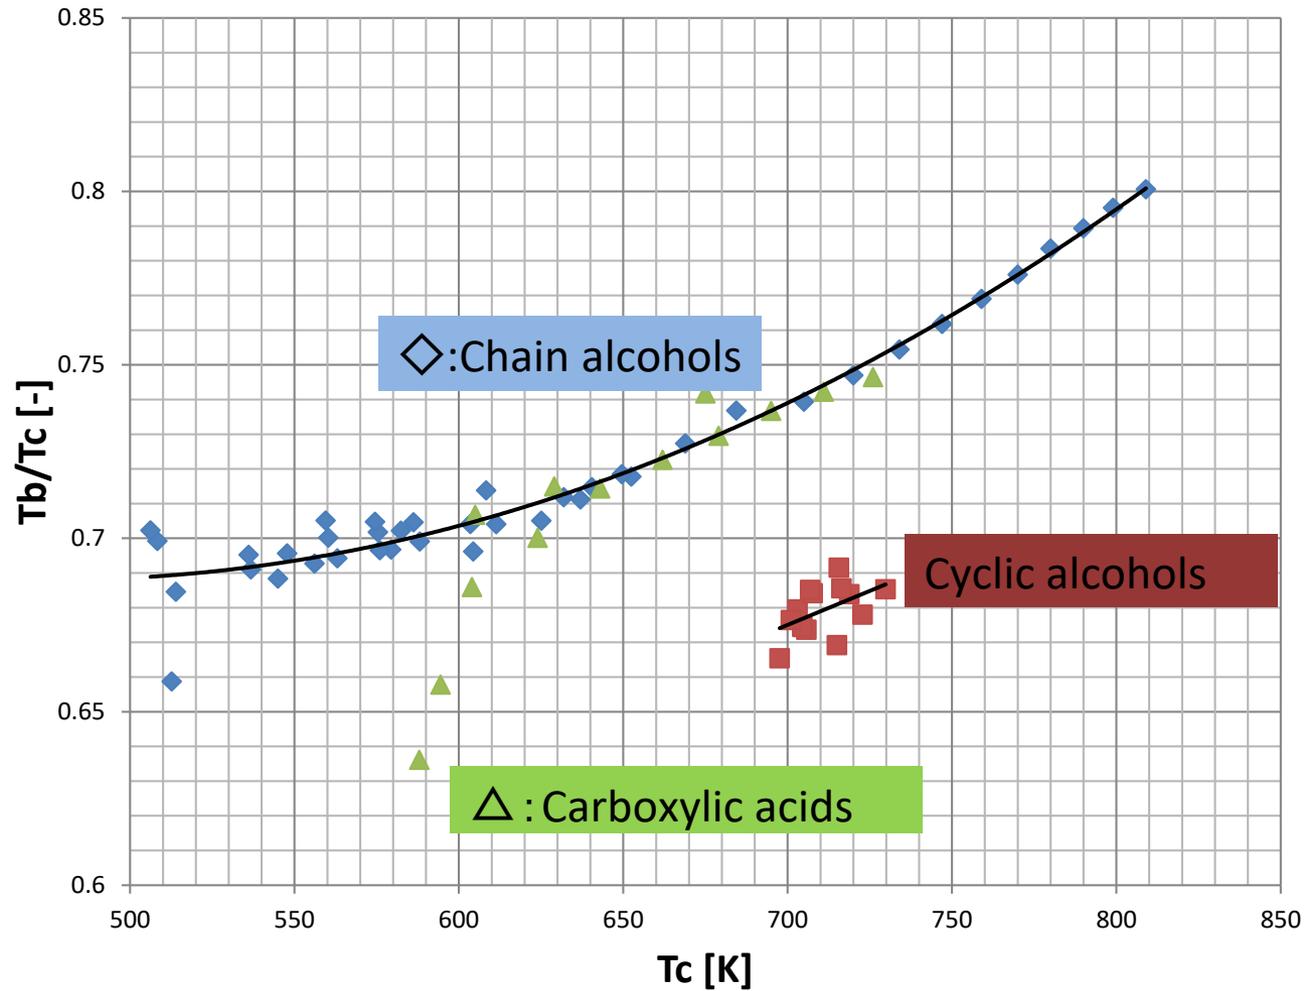

Correlation of T_b/T_c for families seems to be possible

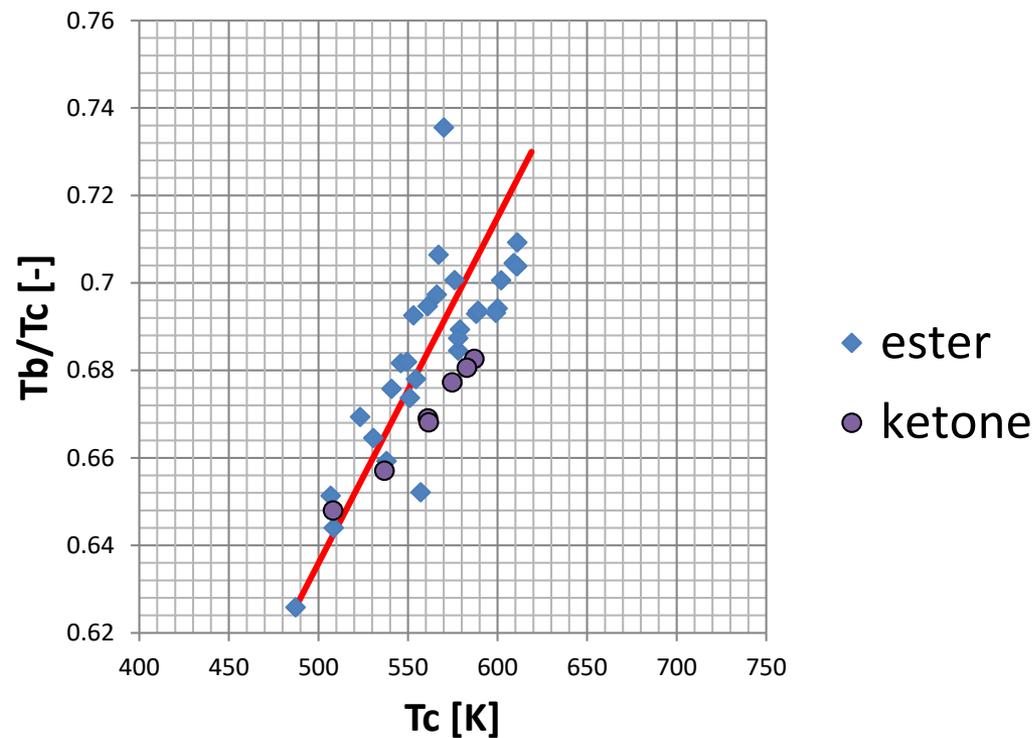

Correlation for hydrocarbons

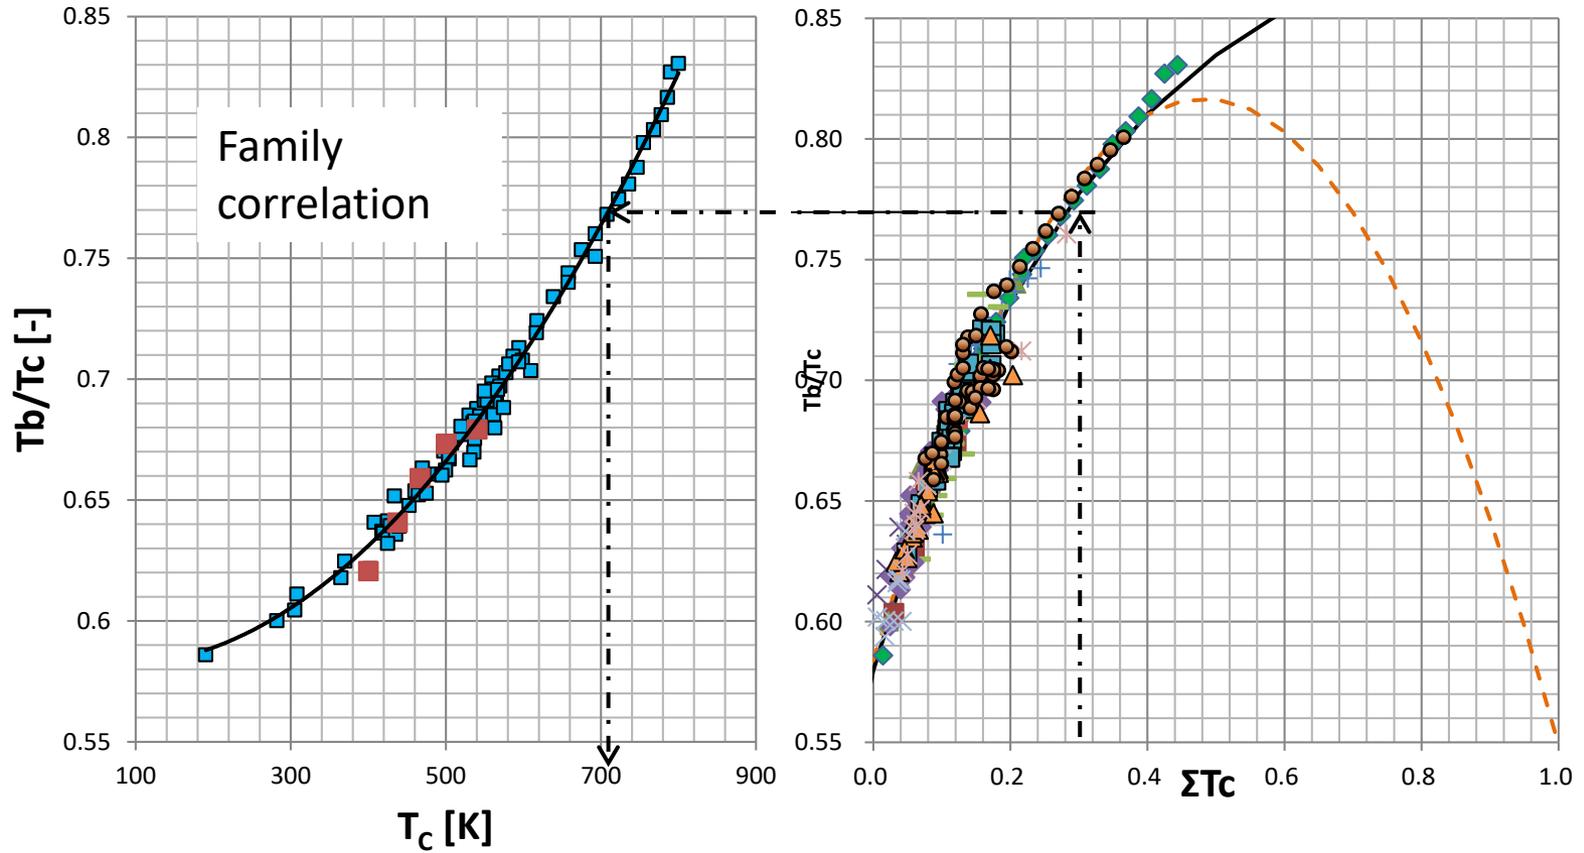

Correlation for alcohols and carboxylic acids

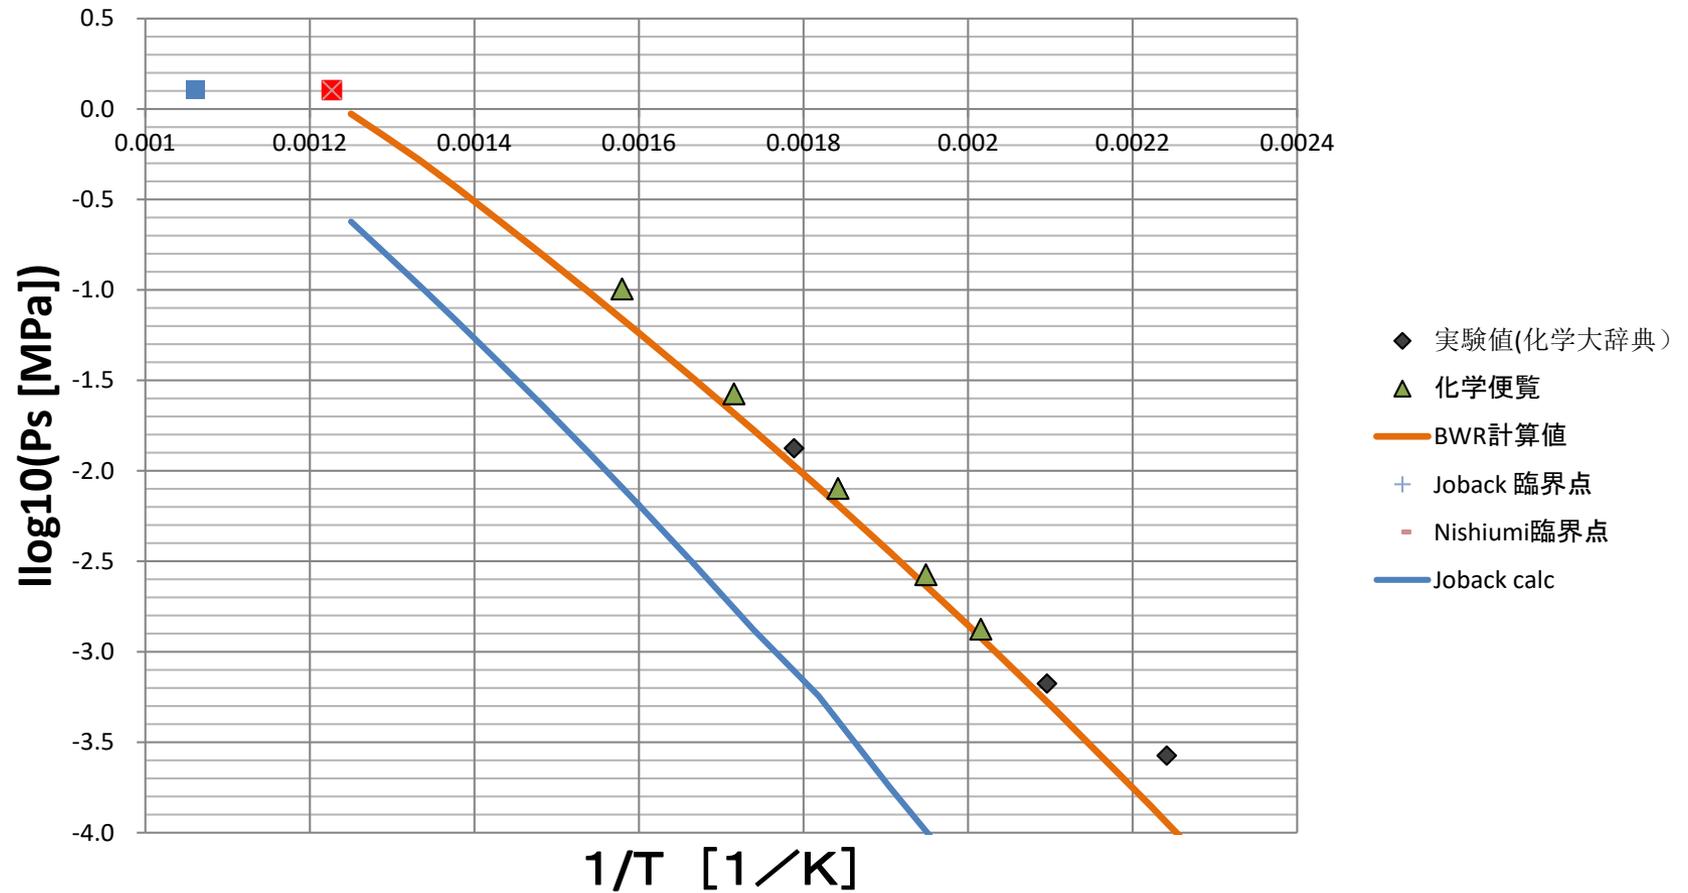

Correlation for esters and carboxylic acids

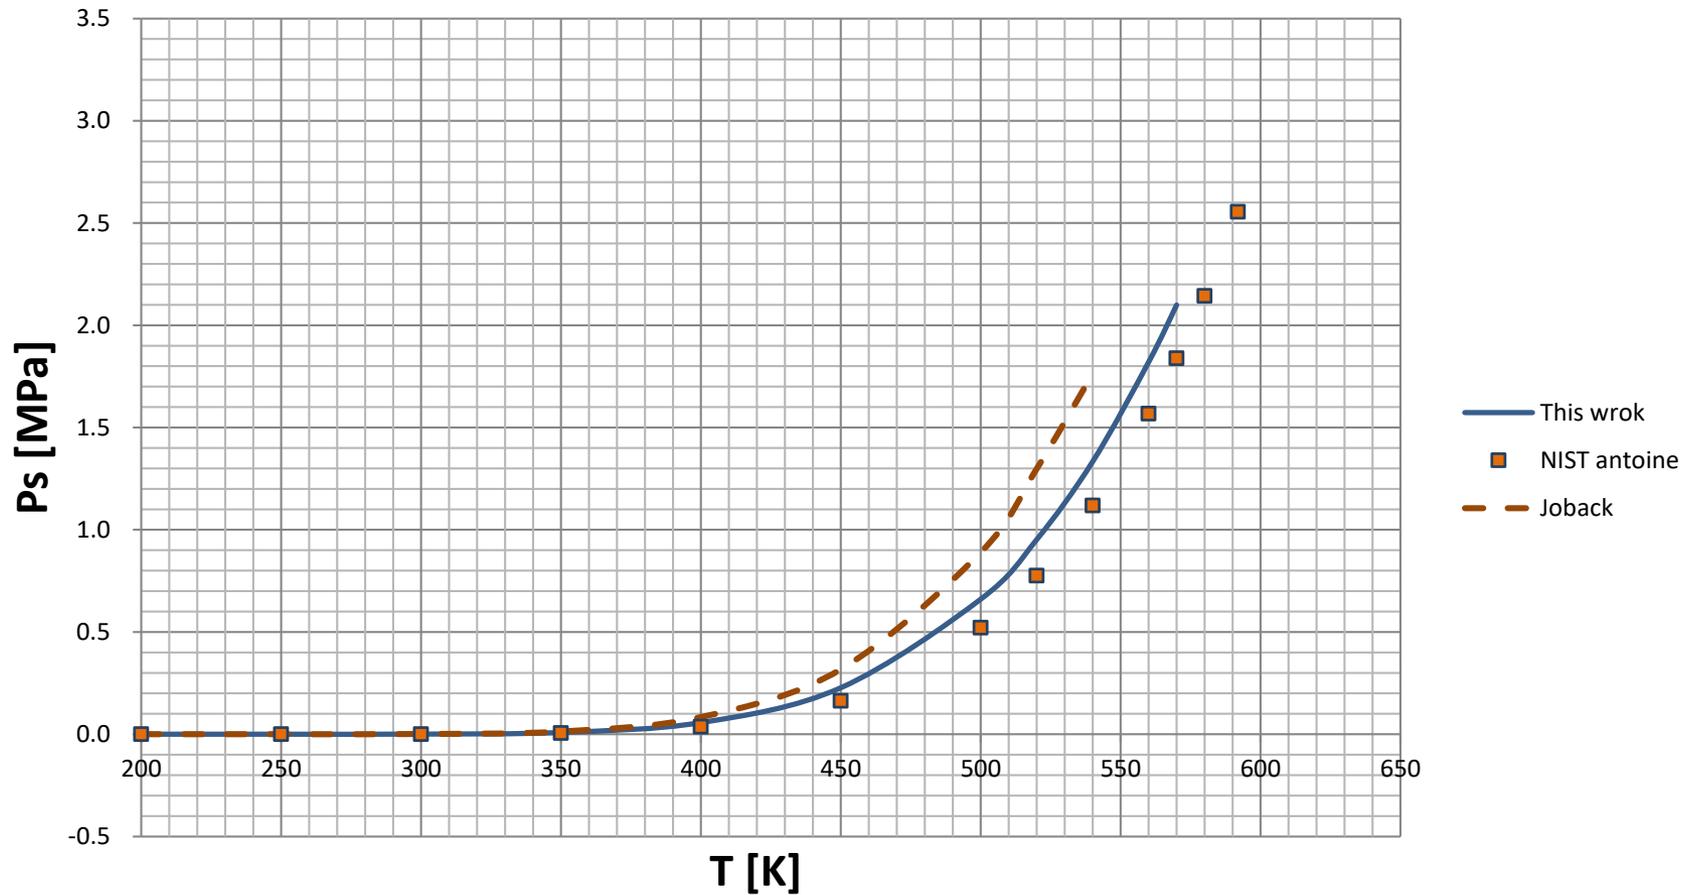

Novel method to predict T_c not using T_b directly

Vapor pressure prediction of Oleic acid

Vapor pressure of Diglyme

Liquid density prediction of Triglyme (at 1atm)

Solubility of H ₂ Opt. mij				Excellent temp. dependent -1~-2	Excellent -1.8	
Solubility of CO ₂ Opt. mij	0.900	0.890	0.845		Excellent temp. dependent -0.8	0.6
Sat. Liquid density	3.8%	6.5%	8.4%			
Sat. vapor density	0.9%	1.1%	1.1%			

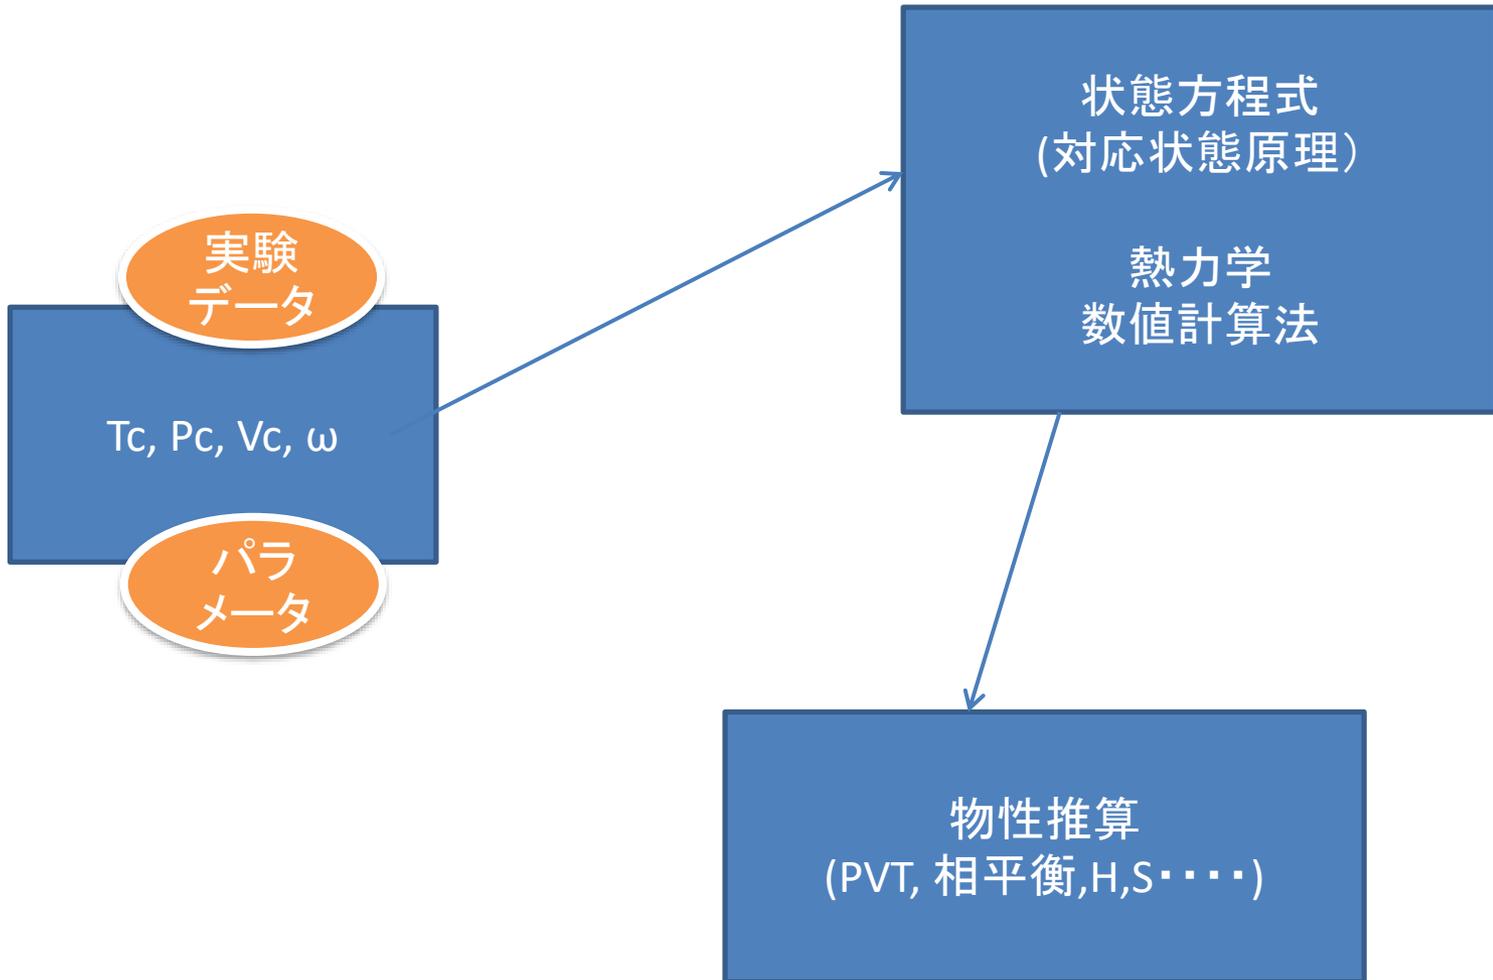

Conclusion

- Extending the Joback correlation to a big molecule has failed. Instead boiling point prediction, relationship between T_c and T_b/T_c depending family component seems effective.

ファミリー相関 $T_b/T_c = g(T_c)$

1. 直鎖HC(alkane/alkene/alkyne/diene)・エーテルは一致性が高い。
 $T_b/T_c = 4.639E-07 * T_c^2 - 6.783E-05 * T_c + 0.5840$ ($T \geq 280K$)
2. シクロアルカン・環状アルコール・多環アレン・含酸素化合物(仮相関)
は、 $T_b/T_c = 2.187E-04 * T_c + 0.5213$
3. カルボン酸と直鎖アルコールは一致すると考えてよい。
 $T_b/T_c = 1.021E-06 T_c^2 - 9.724E-04 T_c + 9.197E-01$ ($T \geq 400K$)
4. エステル・ケトンは、 $T_b/T_c = 7.904E-04 * T_c + 0.2407$
5. フロン類・ハロゲン化物は $T_b/T_c = 2/3 = 0.6667$
6. 単環アレンは $T_b/T_c = 5.819E-04 * T_c + 0.3056$
7. 鎖状含N化合物は $T_b/T_c = 3.804E-04 * t_c + 0.4609$
8. 非鎖状含N化合物は $T_b/T_c = 3.800E-04 * T_c + 0.4110$
9. S化合物 $T_b/T_c = 0.60$ (仮相関)
10. O化合物 $T_b/T_c = 2.000E-04 * T_c + 0.5250$ (仮相関)

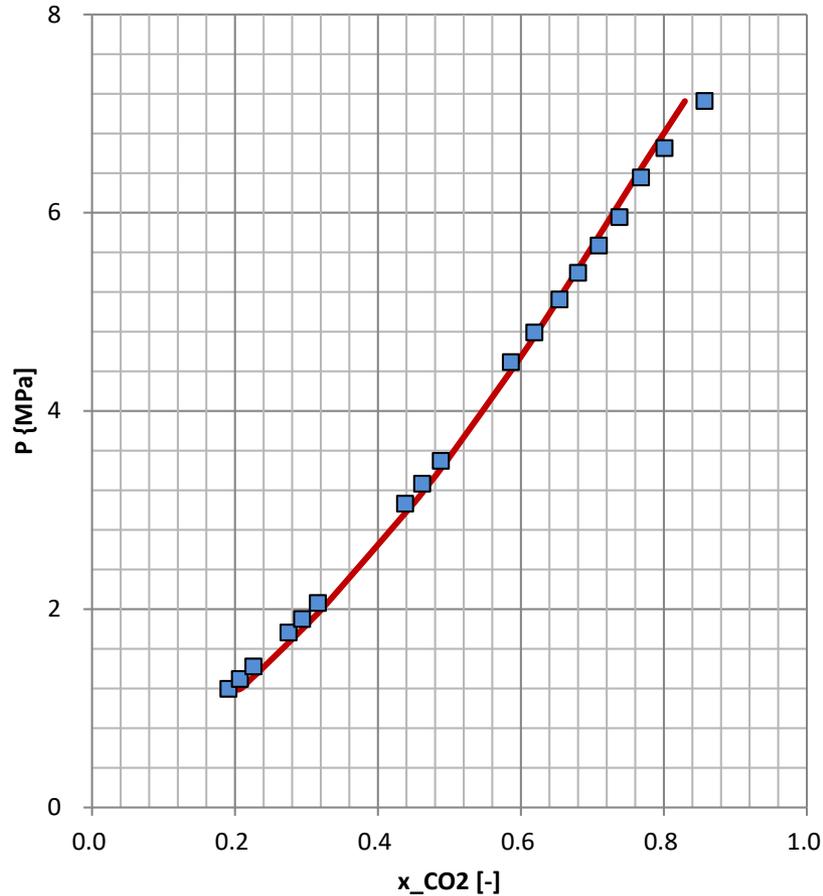

ファミリー法による T_c の推算

- T_b は $\sum T_{bk}$ に線形なため大きな分子では大きな値となり、結果 T_c の推算値が大きくなりすぎ実用的でない
 - 1. $T_b/T_c = -1/(1.3 + \sum T_{ck})^4 + 0.93 = f(\sum T_{ck})$
 - 2. ファミリー相関 $T_b/T_c = g(T_c)$
- を得た。
- $\sum T_{ck} \rightarrow (T_b/T_c) \rightarrow T_c$
- と T_b を経ずに T_c を推算できる方法を提供する
